

Remote Healthcare Requires Reliable Connectivity

Telehealth is changing healthcare as we know it: More healthcare providers are now faced with delivering not only a high level of care, but also reliable connectivity and data security from a distance. Cellular-enabled tablets and mobile hotspots allow patients to securely connect to you even if they don't have access to Wi-Fi or the internet. U.S. Cellular offers mobile device management (MDM) solutions that are designed to support HIPAA compliance. These solutions not only provide the security you need, but also offer improved patient care and a reduction in avoidable emergency department visits and readmissions.

Connect Care Teams and Patients

25 million Americans lack high-speed internet access, 96% of whom live in rural areas.¹

60 million people live in rural areas across the United States, including millions of Medicare and Medicaid beneficiaries.²

U.S. Cellular® Telehealth Advantages

Quick & Easy Setup

Our user-friendly cellular-enabled tablets and hotspots provide reliable internet access.

Fast & Reliable Network

Our solutions are powered by a fast and reliable, nationwide network. And we're building a 5G network that provides a faster, and uninterrupted, experience.

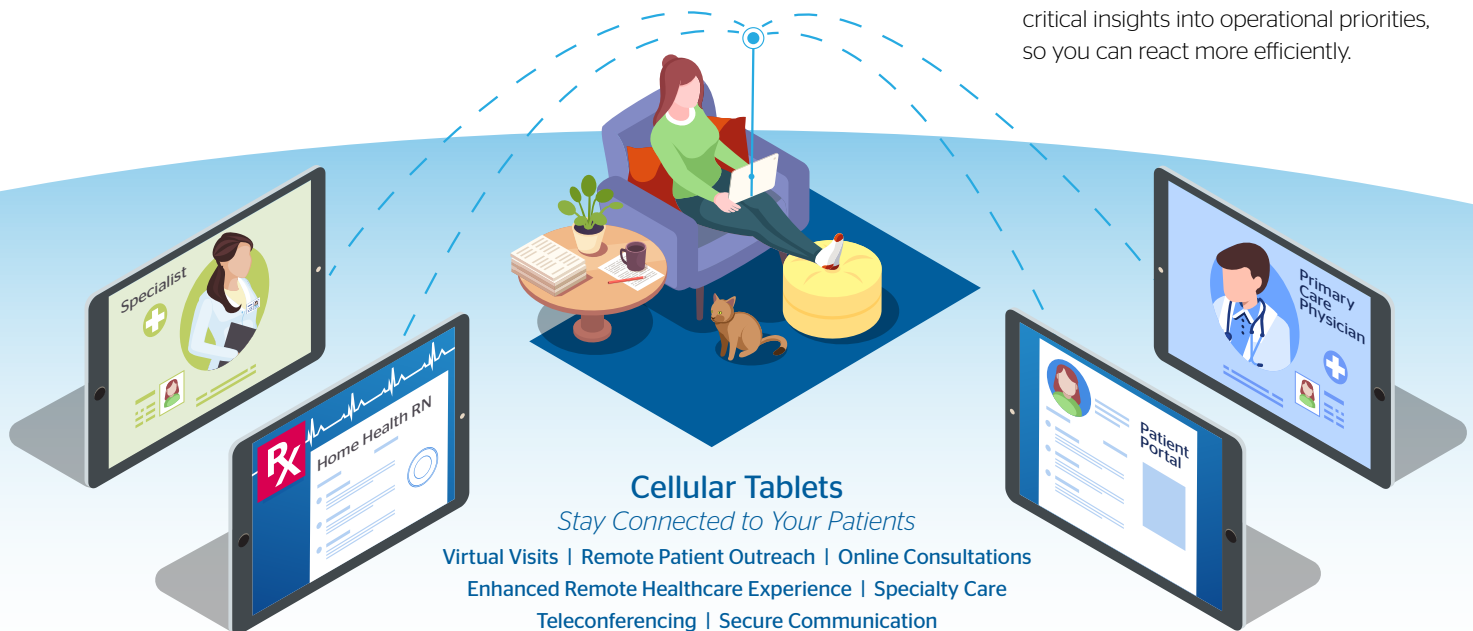

Local Support

Our dedicated, local Business Solutions Experts are ready to help guide you through the ever-evolving state of telehealth, from choosing the right solution to setup and beyond.

Technology Innovations

We offer advanced Internet of Things (IoT) healthcare technology that gives critical insights into operational priorities, so you can react more efficiently.
